

STANDARD PROGRAMMABLE THERMOSTAT

SIMPLE, PROGRAMMABLE COMFORT

LET YOUR INDOOR COMFORT SYSTEM WORK AROUND YOUR SCHEDULE

SIMPLICITY

Carrier offers the best of both worlds for indoor comfort control—energy-saving programmability and ease of use. For many people, the weekly work schedule can be pretty predictable. Then the weekend comes along and changes everything. You wake up later. You stay up later. You're around the house more. For the economy-minded homeowner, that usually means setting the thermostat at a temperature that will provide extra efficiency when you are typically asleep or away and then resetting it for extra comfort during the times you are home. Carrier's Standard Programmable Thermostat lets you enjoy the benefits of creating a personalized comfort schedule in a design that is compact, versatile, and very easy to use.

INSTALLATION FLEXIBILITY

With the ability to work from batteries or from your home's electricity, this is the perfect product for replacing an old, mercury based thermostat or for use in areas where wiring is limited. Two AA batteries can be used to power the thermostat. At most, you will need to replace the batteries once a year. If wiring isn't a problem, Carrier's Standard Programmable Thermostat will provide precision comfort without having to do anything but set your schedule and enjoy the performance.

CAPABILITY

Don't let the sleek, compact silhouette fool you—this thermostat has all the features you need to enjoy efficient indoor comfort. A backlit LCD display makes reading temperature and time information easy on the eyes, day or night. Large, responsive buttons make changing temperature settings or entering your comfort schedule simple and convenient. Traditional toggle-type switches allow you to know, with confidence, which settings you have selected for heating, cooling or fan settings.
