

# NON-PROGRAMMABLE THERMOSTAT

PRECISE, EASY TO USE COMFORT CONTROL

## YOUR COMFORT IS AT YOUR FINGERTIPS.

### EASE OF USE

In a world where cell phones, appliances and other “convenience” items are increasingly complicated, it’s comforting to know that Carrier makes comfort simple. Our Non-Programmable Thermostat is easy on the eyes with a large, LCD display. It’s easy on your fingertips with two responsive push-button controls for adjusting temperature settings. And, because it operates on batteries, this thermostat is an excellent replacement model in areas where wiring is limited. Perfect for both new construction or as an upgrade from your current, mercury bulb type thermostat, Carrier’s Non-Programmable Thermostat is versatile as it is easy to use.

Enjoy the convenience of push-button temperature control with traditional toggle switches to select heating, cooling and fan functions. It couldn’t be easier. Simply enter your preferred heating or cooling temperature settings, then sit back and relax! And you’ll only have to replace the batteries at most once a year.

### QUALITY DESIGN

Although it’s one of our more basic thermostats, you’ll benefit from Carrier’s commitment to delivering quality products. The sleek, slim profile is attractive, yet unobtrusive. At the same time, we made the outline of its casing large enough to cover wall markings from most older thermostats you may be replacing. And even though the unit is compact, the two most critical elements—the temperature readout and temperature control buttons—are large.

In a world where life keeps getting more complicated, leave it to Carrier to deliver indoor comfort control with good, old-fashioned quality and simplicity.
