Debonair™ Thermostats

SETTING A NEW INDUSTRY STANDARD

Precise Control for Carefree Comfort.

In the market for attractive commercial thermostat solutions that deliver precise temperature control, are reliable, easy to install, simple to operate, *and* will stay within your budget? Then Carrier's Debonair™ thermostats and accessories are the clear choice.

Utilizing the latest digital technology, Debonair thermostats offer the features most requested by building owners – at a surprisingly affordable price. And it doesn't matter what type of heating or cooling equipment you already have since Debonair thermostats work with virtually all of them.

Once Debonair thermostats are installed and programmed to meet your specific operating and comfort requirements, you won't have to give them a second thought. Each is designed with a wide array of the most popular operating features found today.

Beautifully designed to complement any interior, these thermostats address a wide variety of most building owners' concerns – ranging from programmability to energy savings to security.

And for the highest level of personalized comfort, our Debonair Wireless thermostats and remote room sensors go wherever you want them to – with no wires to run and no holes to make in the walls.

So if you want hassle-free comfort control, precision, reliability and three great designs to choose from, choose the best...

Debonair commercial thermostats from Carrier.

1-For-All Thermostat Control

With so many different heating and cooling systems out there, choosing Debonair means you won't have to worry about which thermostat is compatible with which system. Debonair thermostats are the perfect choice for gas, electric, heat pump and hydronic systems.

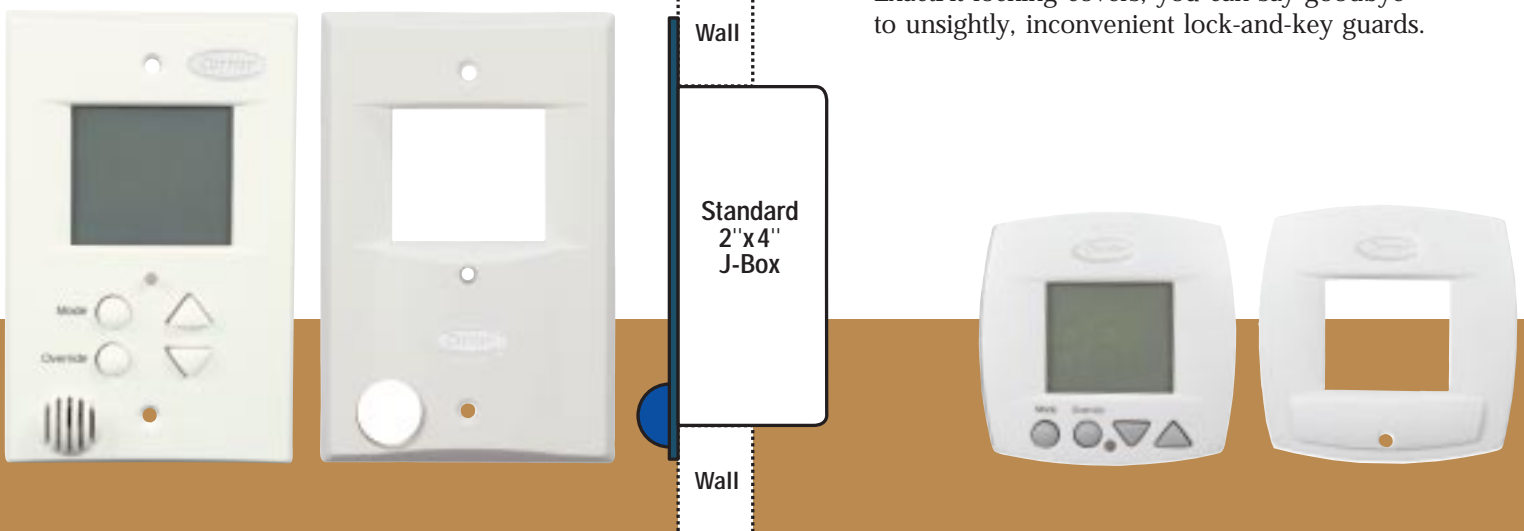

Affordable, Money-Saving Features

Today, building owners and operators are constantly seeking ways to lower expenses. Carrier's Debonair thermostats' competitive price is only the beginning of its cost benefits. Debonair gives you precise, yet flexible control of your heating/cooling equipment. Run it only when you need to, at levels appropriate to your building's occupancy status. Our smart fan is a convenient, energy-saving feature. Leave it on continuously and it does the rest – running only during occupied periods, or when the system calls for heating or cooling in unoccupied periods. For additional savings, our Light Activated thermostat changes your system automatically to its pre-set non-occupancy levels when building occupants turn off the lights for the day.

Attractive Design

Each Debonair unit reflects how far we've taken the visual and tactile aesthetics of traditional, boxy-looking thermostats. Rather than "hanging them on the wall," we've opted to make them be part *of* the wall. For example, our FlatStat™ mounts flat to any wall. For optimal performance, it can easily install within all standard 2" x 4" Junction (J) boxes.

And with Debonair's programmable security features and ExactFit locking covers, you can say goodbye to unsightly, inconvenient lock-and-key guards.

Larger numbers are easy to read both day and night.

Shown actual size

Carrier Debonair thermostats are available in non-programmable as well as 7 day and 5-1-1 programmable.

To meet all comfort requirements, high and low setpoints can be adjusted from 35°F to 99°F.

You have the option of a continually lit display, or automatic shutoff 8 seconds after the push of a button.

An Easy Read

You'll never find yourself squinting to read Debonair's attractive display panel – and neither will your building's occupants. All our thermostats come with a large, easy-to-read Thermoglow™ display. A simple adjustment shows degrees in either Celsius or Fahrenheit. And an indicator light glows red when the system is heating and green when it is cooling. All the information you need, nicely packaged.

Programming: Simple Yet Powerful

Debonair thermostats feature 7 day or 5-1-1 programming, with the flexibility of up to 4 time periods per day. Holiday programming – for up to 99 consecutive days – simplifies planning for extended shutdown periods. And our copy command makes programming easier than ever.

No Batteries Required

Debonair's NeverLost™ memory means two things – you won't be worrying about replacing any batteries and you'll be getting peace of mind. Once you've programmed your Debonair thermostat to match your comfort requirements, the data is stored in its non-volatile memory forever – or until you change it. In the event of a power failure, Debonair's internal power source will keep and display the time for up to 48 hours.

The Utmost In Security

Debonair's real beauty is far from skin deep – especially when security is an issue. Adjustable setpoint limiting helps you operate your heating and cooling equipment efficiently by restricting temperature-setting access to only authorized personnel. For added security, Debonair's

ExactFit locking covers provide attractive, tamper-proof protection. For large public areas, Debonair's Wireless and Light-Activated Remote Room Sensors deliver energy-savings while providing the ultimate in security.

Indoor Air Quality

Studies have shown that the quality of indoor air directly contributes to individual performance and productivity. Debonair thermostats have a pre-occupancy purge feature which “clears the air” by starting the fan up to three hours before your building's occupants arrive. Its Economizer Control draws outside air rather than initiate your heating or cooling equipment. And Debonair even lets you know when it's time to clean or replace your filters!

Wireless Freedom

Debonair Wireless thermostats go wherever you need them, quickly and easily giving you precise temperature control. Up to four thermostats can be placed in convenient monitoring locations – giving you the ultimate in flexibility! Our Wireless Remote Room Sensors transmit data to one sensor for temperature averaging and are also equipped with a manual override command feature.

Our Wireless thermostats deliver the same state-of-the-art benefits as our wired models – with the flexibility to change their location whenever your needs change.

Carrier's Debonair thermostats... choose the best!

Debonair Thermostats... The Perfect Solution for Many Building Applications.

Carrier's economical, easy-to-use Debonair thermostats offer a wide range of popular operational features designed to deliver comfort in a variety of building types.

EDUCATION

Debonair thermostats provide the comfort and high quality indoor air students need to perform at their best. And security features, such as our ExactFit locking cover and tamper-proof remote sensor, make Debonair ideal for school classrooms, hallways, offices, lunchrooms and auditoriums.

HEALTHCARE

The Debonair Wireless thermostat's portability and ease-of-use are important features for patients with limited mobility. It operates anywhere within 500 feet of the equipment-mounted receiver. ThermoGlow's™ large numbers and luminous display make it easy to read.

OFFICE

Debonair's pre-occupancy purge and filter service indicator help deliver high quality indoor air. The Economizer Control decides when to draw outside air rather than initiate your heating or cooling equipment. Light Activated units help save costs in buildings which have intermittently occupied spaces.

RETAIL

Large retail spaces clearly benefit from Debonair's Light Activated thermostats and Remote Room Sensors which maximize energy savings while offering a comfortable environment for customers. Programmable security features couple with ExactFit locking covers to make it the perfect choice.

MANUFACTURING

Industrial users will appreciate the precise temperature control and energy cost savings of Carrier's Debonair thermostats. Our wireless models and remote room sensors deliver the ultimate in flexibility for fast-changing manufacturing environments.

OTHER APPLICATIONS

Debonair thermostats deliver the most popular features for ease-of-use and security. Building owners will benefit from enhanced comfort control with lower energy consumption and reduced operating costs while occupants enjoy improved indoor air quality and comfort.

As the world leader in Heating, Ventilation and Air Conditioning, Carrier is committed to continually improving the quality of comfort we provide to our customers.

But our level of responsibility extends well beyond...

Carrier Corporation has identified six specific areas which directly impact how we, as a world manufacturer, balance our customers' needs for comfort with the environment's needs for responsible consumption.

These symbols graphically represent our six areas of concentration and will serve as visual reminders of the importance of managing our finite resources.

Each one of us at Carrier Corporation believes that, for generations to come, success will not only be measured by the quality of our products and systems, but also by how we have improved the quality of life.

Carrier manufactures a wide variety of system products for virtually any application requirement. The Debonair line of commercial thermostats is designed for compatibility with Carrier's Packaged Rooftop Units and Split Systems.
