AQUASNAP™ Air-Cooled Chillers with PURON® Refrigerant

Improving the industry's most innovative chiller

Carrier's new line of AQUASNAP chillers represent the type of forward-thinking design that demanding consulting engineers, contractors and building owners are asking for. Compact, efficient, quiet, intuitive controls and 22 models ranging from 60 – 390 tons make this chiller an ideal choice for a wide range of ground or rooftop applications.

Leading the list of operational features is the use of PURON® refrigerant. And with part-load EER ratings as high as 14.2, AQUASNAP chillers provide the lowest operating costs of any air-cooled chiller in the industry using PURON refrigerant.

AQUASNAP air-cooled chillers are unique in their modularity and capability for adapting to any need and application. Its compact, all-in-one design facilitates installation in minutes using only two tools — a wrench for the water piping and a screwdriver for the three-wire power connection.

AQUASNAP chillers are available with or without an integrated pumping package. This hydronic package option includes the pump, combination valve, flow switch, strainer, pressure / temperature taps and required piping. Factory designed, tested and installed, the prepackaged system costs less and installs more quickly than buying and installing the components individually.

The maintenance-free scroll compressor is protected by an auto-adaptive control to minimize wear and Carrier's exclusive AeroAcoustic™ fan is nearly twice as quiet as the competition. AQUASNAP's ComfortLink™ control system communicates in English, Portuguese, French, and Spanish.

BENEFITS AT A GLANCE

For Building Owners & Managers

- Reduced operating costs
- Quiet operation
- Reliable operation
- Environmentally sound PURON® refrigerant

30RB

For Consulting Engineers

- Simple to select
- ASHRAE 90.1 compliant
- High efficiency
- Flexibility
- PURON refrigerant

For Contractors

- Streamlined installation
- Reduced installation expense
- Reliable performance
- Easy to start up and operate
- Plug and play hydronics
