CCNWeb — Experience the freedom of web access to completely control and manage your Carrier Comfort Network.

CASE STUDY

Discover how Carrier's Controls Technology meets Architectural Art in New York City's newest landmark — the Time Warner Center on Columbus Circle.

CCNWeb... Giving You the Freedom to Monitor and Control Your Carrier Comfort Network from Anywhere Over the Web.

With CCNWeb, you can have complete access to your CCN from anywhere inside or outside your network, using a web browser via Local Area Network (LAN) or telephone line (P2P). This Internet/Intranet connection allows you to access status displays, occupancy and setpoint tables for all CCN controllers. It also allows overriding (forcing) and "autoing" (returning points to a controller's automatic control) of point values.

For example, an on-site manager, could receive a call from the building lobby that the temperature was too high. Using a corporate intranet, the manager could examine the actual temperature in the lobby, change the setpoints on the thermostat, and monitor the change in temperature.

Physically, the CCNWeb module consists of a compact unit equipped with specialized hardware and software. It can be placed on a desktop or mounted on a wall using standard equipment supplied with the unit. It features tabular and "ViewSPACE" displays. Tabular pages consist of data from one or more CCN controllers displayed in a tabular format. ViewSPACE pages are dynamic graphical pages that combine a background image such as an equipment picture with a set of superimposed dynamically-updated real-time status display points from one or more controllers.

CCNWeb is particularly useful to off-site managers who are responsible for several buildings. It now allows them to receive trouble calls and make simple changes in settings, or drill down into subsystems, performing remote diagnostics like checking to determine if an air handler is functioning, if cooling or heating is being delivered, and so on.

Additionally, the information managed on the CCNWeb can be distributed over corporate intranets, the internet (with accompanying passwords and security), and even to web-enabled cellphones, providing managers with a new level of access to critical information while traveling.

CCNWeb delivers modern controller technology in a small, yet powerful package. By integrating Internet information delivery with a standard — yet flexible — interface, CCNWeb gives you a simpler,

cost-effective method of managing your buildings.

Carrier and Time Warner... a Partnership of Controls Technology and Architectural Art

PRODUCT

AXIS™ — hear all about Carrier's new Underfloor HVAC Systems from the floor up.

Carrier's 100-year tradition of providing unmatched indoor comfort and control continues in the landmark Time Warner Center at Columbus Circle in New York City.

CASE STUDY

Journey to Egypt and see how Carrier is helping to preserve millions of volumes and thousands of ancient and rare manuscripts for future generations.

Maintaining precise comfort and operating temperatures for 2,000 employees in nearly 760,000 sq. ft. of studio, broadcast, technical, office and retail space was the challenge. The solution combined our high efficiency world-class HVAC products, industry-leading Carrier Comfort Network® (CCN) controls technology and exemplary customer service.

Customers like Time Warner realized the benefits from integrated, factory-mounted controls on all our HVAC equipment, built-in energy saving control routines, a very friendly web-based user interface and multi-vendor/multi-protocol system integration with CarrierOne™. We also have complete system management tools for energy analysis, tenant metering and maintenance management reports.

We're extremely proud to be an integral part of this dynamic project. To learn more about our products and services, call 1.800.CARRIER or visit our website at www.commercial.carrier.com.
