## WHAT'S NEW FROM CARRIER

### *AgION... Antimicrobial Coated Steel*

*The AgION antimicrobial coating uses the controlled release of silver ions to provide continuous suppression of microbial growth on the product to which it's applied.*

Through an exclusive agreement, Carrier is now designing HVAC equipment with antimicrobial coated steel, giving our customers simple and economical access to the protective benefits of antimicrobial treated products. Carrier's 39M Aero air handling unit is now available with the AgION antimicrobial coating as an integral material in its pre-painted steel inner liner — the inside cabinet surface that's exposed to the airstream. This material can also be selected for our Racan custom air handlers, as a tinted coating applied to their inside galvanized steel panels. And we look forward to applying this new technology to an expanded range of Carrier products.

## PRODUCT UPDATE

Say goodbye to the dilemma of custom versus price. With 39M Aero, Carrier takes an entirely new approach. We deliver an unprecedented number of custom features off the shelf. No custom price, no custom lead times — but all the advantages of the most sophisticated air handling technology.

In 39M Aero, science meets art. Our engineers have achieved substance with style, dynamic performance in a streamlined package — with very practical results. 39M Aero's revolutionary casing delivers benefit after benefit, from IAQ enhancements to dramatically improved ease of installation. And this is just the beginning. The new generation of 39M Aero equipment will continue to expand and evolve, with new features and new standards of excellence.
