CARRIER INTRODUCES NEW ENHANCEMENTS TO CENTURION™

ROOFTOPS WITH PURON® REFRIGERANT

(DALLAS, Tex. – January 30, 2007) – Carrier Corporation, a subsidiary of United Technologies Corp. (NYSE:UTX), today announced new product enhancements to its popular line of Centurion™ package rooftop air-conditioning units using PURON® refrigerant (R-410A). These major product introductions demonstrate Carrier's continuing commitment to providing creative energy saving package solutions with environmentally sound refrigerants.

"Along with the recognition through the winning of awards such as *The NEWS'* Dealer Design Award (Gold Status) and *Buildings'* Editors' Choice Top 100 Products, the Centurion continues to lead the way in providing optimum life cycle performance solutions," said Chris Nelson, vice president and general manager, Light Commercial Systems, North America. "We have taken the Centurion, our fastest growing product, and upgraded it up to 15 SEER plus added our patented HUMIDIMIZER™ Adaptive Dehumidification System. And, as a first for us, we have integrated factory installed Energy Recovery Ventilators

(ERV's). These enhancements will exceed customer requests for higher efficiencies with environmentally sound refrigerants while providing better package comfort solutions that also support LEED initiated projects."

"In addition," said Ted Cherubin, product manager, Centurion rooftops, "we kept all of great base design features that add to optimum life cycle performance and the Centurion's maintainability, 'install-ability,' and efficiency along with its comfort and IAQ performance. These features include standard hinged access panels, single pass/single slab coils, slide-out blowers, slide-out heat section and condensate pans. Integrated communication controls like our ComfortLink™ intelligent system, four-inch filters and the industry's lowest sound levels for this type of equipment are also among the great base features. The new enhancements not only add to what the market has been asking for, but they also greatly expand the application range for these products while providing justifiable value and comfort."

Nelson added, "Available in 13 sizes ranging from two to 25 tons in gas or electric heating and cooling-only models, we have the right unit for virtually every application. When it comes to HVAC and Carrier, our Centurion units combined with our other Weathermaker® and Weathermaster® series rooftops provide what we feel is the best lineup from a single source supplier."

Carrier Corp., headquartered in Farmington, Conn., is the world's largest provider of heating, air conditioning and commercial refrigeration solutions with operations in 172 countries. It is a subsidiary of United Technologies Corp.,

which provides a broad range of high technology products and support services to the aerospace and building systems industries worldwide. For more information on Carrier products, visit www.carrier.com.
