**Carrier Corp. Offers Its Most Comprehensive High Performance Light Commercial Solution with WeatherMaster® Packaged Rooftops**

SYRACUSE, N.Y., Jan. 31, 2011 — Carrier Corp.'s WeatherMaster® packaged units, the company's most comprehensive rooftop line to date, are offered in 3 to 25 tons and meet or exceed ENERGY STAR® and Consortium for Energy Efficiency (CEE) levels, making them eligible for a variety of state and utility rebates. Designed with streamlined installation and maintenance and efficient operation in mind, WeatherMaster rooftops are available with many certified and pre-engineered factory options and field installed accessories. Most of the models are specifically designed to fit Carrier and similar roof curbs that were installed up to 23 years ago, eliminating the need for curb adapters or changing utility connections. Carrier Corp., a unit of United Technologies Corp. (NYSE:UTX), is the world's leader in high technology heating, air-conditioning and refrigeration solutions, improving the world around us through engineered innovation and environmental stewardship.

Factory and field stocked, WeatherMaster units are available in gas heat/electric cooling, electric heat/electric cooling or packaged heat pump models. Units deliver SEER ratings as high as 15.8 and EER ratings up to 12.8. All models are capable of either vertical or horizontal airflow.

“We designed our full line of WeatherMaster packaged rooftops to meet virtually every light commercial application need,” stated Greg Alcorn, vice president of sales and marketing for Carrier Light Commercial Systems. “The units provide innovative features that improve performance and reliability and are the perfect solution for energy retrofits or upgrades.”

WeatherMaster units feature an oversized control box, easy-grip handles on access panels and no-strip screws. User-friendly integrated terminal boards allow for easy installation of many factory or field-installed devices as well as Carrier’s RTU Open controller that provides communication links to third party building automation systems via BACnet®, Modbus®, LonWorks® or Johnson Controls® N2 protocols.\*

Ted Cherubin, marketing manager, Carrier Light Commercial Systems, noted, “We are also excited about being able to offer our customers extended warranty protection and Carrier commercial financing through our financing provider Ervin Leasing. Both programs offer competitive rates and can be tailored to customers’ operational requirements, which makes purchasing equipment that much easier.”

“We look forward to presenting this line in road shows throughout 2011,” added Alcorn. “We are confident that the WeatherMaster series will appeal to HVAC professionals who need fast, easy availability and installation as well as high efficiency solutions to reduce customers’ energy consumption and costs.”
